SQLiv – SQL Injection Dork Scanning Tool

Last updated: October 23, 2017 | 10,907 views

SQLiv is a Python-based massive SQL Injection dork scanning tool which uses Google, Bing or Yahoo for targetted scanning, multiple-domain scanning or reverse domain scanning.

```
panda@linux ~/Desktop/Dev/sqliv $ python sqliv.py -t
[MSG] [03:43:37] finding domains with same server as 
[MSG] [03:43:39] found 30 websites
[MSG] [03:43:39] scanning multiple websites with crawling will take long
[OPT] [03:43:39] do you want save domains? [Y/N]: n
[OPT] [03:43:41] do you want start crwaling? [Y/N]: y
[MSG] [03:43:42] crawling 
[MSG] [03:43:43] found no suitable urls to test SQLi
[MSG] [03:43:43] crawling 
[MSG] [03:43:45] found 2 urls from crawling
[MSG] [03:43:45] scanning .php?id=27 vulnerable
[MSG] [03:43:46] scanning .php?id=25 vulnerable
[MSG] [03:43:46] crawling 
[MSG] [03:43:49] found no suitable urls to test SQLi
[MSG] [03:43:49] crawling 
```

SQLiv Massive SQL Injection Scanner Features

Both the SQLi scanning and domain info checking are done in a multiprocessing manner so the script is super fast at scanning a lot of URLs. It's a fairly new tool and there are plans for more features and to add support for other search engines like DuckDuckGo.

- Reverse domain scanning

Using SQLiv For SQL Injection Dorks Scanning

Multiple domain scanning with SQLi dork

Simply search multiple websites from given dork and scan the results one by one:

```
1 python sqliv.py -d <SQLI DORK> -e <SEARCH ENGINE>
2 python sqliv.py -d "inurl:index.php?id=" -e google
```

Targetted scanning

You can provide just the domain name or specific URLs with query parameters. If only the domain name is provided, it will crawl and get URLs with queries then scan the URLs one by one.

```
1 python sqliv.py -t <URL>
2 python sqliv.py -t www.example.com
3 python sqliv.py -t www.example.com/index.php?id=1
```

Reverse domain and scanning

Reverse domain scan and look for websites that are hosted on the same server as target URL.

```
1 python sqliv.py -t <URL> -r
```

SQLiv Dork SQL Injection Tool Usage

```
1 python sqliv.py --help
2
3 usage: sqliv.py [-h] [-d D] [-e E] [-p P] [-t T] [-r]
4
5 optional arguments:
6 -h, --help  show this help message and exit
7 -d D        SQL injection dork
8 -e E        search engine [Google only for now]
9 -p P        number of websites to look for in search engine
10 -t T        scan target website
11 -r         reverse domain
```

There is nothing else exactly like this, there are tools for information gathering via dorks like:

- [snitch](#) – Information Gathering Tool Via Dorks
- [dork-cli](#) – Command-line Google Dork Tool

And SQL Injection tools like:

- [jSQL](#) – Automatic SQL Injection Tool In Java
- [BSQLinjector](#) – Blind SQL Injection Tool Download in Ruby

You can download SQLiv here:

[sqliv-2.0.zip](#)

Or read more [here](#).

Amazing, might try one of these some days, looking into learning Python after I grad. this Military Academy!

Darknet November 2, 2017 at 2:58 pm #

Totally recommend Python as a good way into infosec, plenty of tools to examine and a solid set of libraries.
